WITS Changes – 17.16.0 Release (SUD)
4/14/2015

In the 17.16.0 Release 6 bugs were repaired in WITS. Below are a summary of the errors and the resolutions of the problems.
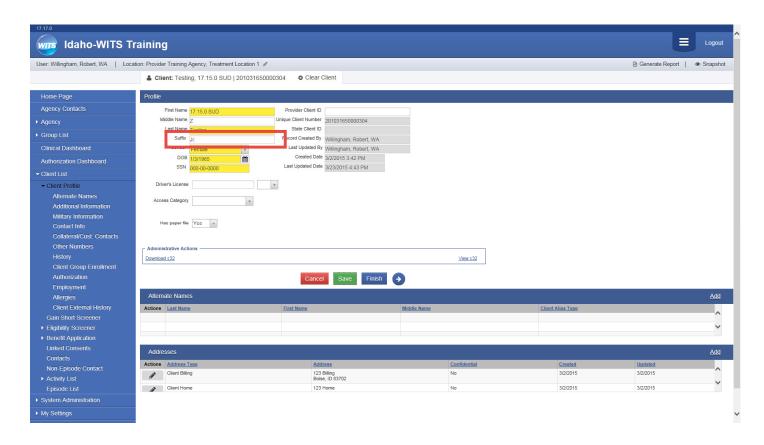

1) Appointment Search: The appointment search criteria are cleared after reviewing an encounter. **Resolution**: Search criteria are now saved after reviewing an encounter and returning to the appointment search screen.

2) Client Profile: Client Group Enrollment link is missing from navigation when in the Employment section. **Resolution**: The Client Group Enrollment link is displaying in the left column in the Client Profile Menu when user clicked the Employment link.

3) Group Notes: When creating a Misc. Note from the Group Session screen, the duration does not calculate on the Misc. Note. **Resolution**: Misc. Notes created from Group Session Notes now calculate the duration.

4) Provisional Vouchers: Always set the # of units to 0. **Resolution**: The # Authorized Units was supposed to be set to '0' as part of enhancement work item #22123 in the 17.12 release, however this was being overridden for ATR by the Default ATR Units designated on the Service Profile. This has been corrected so that the # Authorized Units will now be set to '0' when creating a provisional ATR voucher regardless of the value for the service's Default ATR Units.

5) Consent: Error screen when trying to review a Consented Admission. **Resolution**: Viewing a consent Admission will no longer result in an error.

6) ASAM: Word wrap is not functioning properly when running WITS in Google Chrome. **Resolution**: The wrapping issue has been fixed so that words are split in two parts at the end of each line in Google Chrome browser.

Below you will find a summary of the change to WITS for the 17.16.0 release (which took place April 16, 2015). When these changes are made in Idaho-Mountain and Idaho-Pacific, the top left portion of your screen will say 17.16.0.

17.16.0

WITS **Idaho-WITS Training**   ☰   Logout
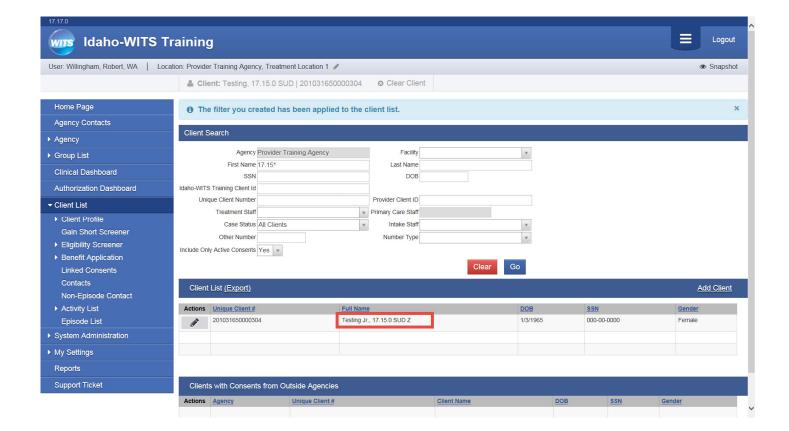

Client

A Suffix field has been added to the Client Profile screen. The Suffix field is a text field and is optional.

The client name will now appear on the Client List as last name, suffix, first name, and middle initial.

Client List/Episode List

WITS will now automatically change the context facility based on the location of an episode, rather than having to go through the My Settings - Change Facility screen. This feature is applicable for staff assigned to multiple facilities at which the episodes exist, as well as for staff having the WITS Administrator, and/or ATR Administrator roles.

Client Profile

The SSN rule has been changed so that WITS will now allow a SSN to be duplicated where the first five characters are 0s and the last 4 digest already exist within an agency (example: 000-00-1234).

Vital Signs

The Vital Signs screen has been moved from under Intake to under Treatment in the navigation menu. In addition, the following fields have been added: Pulse, Resp min, O2 Stat %, Temp, Waist Circumference, and Time Taken On.
